Biol. 30:863-872(1996).

-i- FUNCTION: SUCROSE-CLEAVING ENZYME THAT PROVIDES UDP-GLUCOSE A FRUCTOSE FOR VARIOUS METABOLIC PATHWAYS.

-i- CATALYTIC ACTIVITY: UDP-GLUCOSE + D-FRUCTOSE = UDP + SUCROSE.

-i- TISSUE SPECIFICITY: EXPRESSED MOST PREDOMINANTLY IN TAP ROOT.
                                                                                               Eukaryota;

"Identification and prevalence of a genetic defect that causes
leukocyte adhesion deficiency in Holstein cattle.";

Proc. Natl. Acad. Sci. U.S.A. 89:9225-9229(1992).

-i- FUNCTION: INTEGRIN ALPHA-L/BETA-2 IS A RECEPTOR FOR ICAM1, ICAM2,
ICAM3 AND ICAM4. INTEGRINS ALPHA-M/BETA-2 AND ALPHA-X/BETA-2 ARE
RECEPTORS FOR THE IC3B FRACMENT OF THE THIRD COMPLEMENT COMPONENT
AND FOR FIBRINGGEN. INTEGRIN ALPHA-X/BETA 2 RECOGNIZES THE
SEQUENCE G-P-R IN FIBRINGEN ALPHA-CHAIN. INTEGRIN ALPHA-M/BETA-2
REGOGNIZES P1 AND P2 PEPTIDES OF FIBRINGEN GAMMA CHAIN. INTEGRIN
ALPHA-M/BETA-2 IS ALSO A RECEPTOR FOR FACTOR X. INTEGRIN ALPHA-
D/BETA-2 IS A RECEPTOR FOR ICAM3 AND VCAM1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ASSOCIATES WITH EITHER ALPHA-L, ALPHA-M, ALPHA-X OR ALPHA-D. SUBCELLULAR LOCARION: TYPE I MEMBRANE PROTEIN.

DISBASE: DEFECTS IN ITGB2 ARE THE CAUSE OF LEUKOCYTE ADHESION DEFICIENCY (LAD). THE MUTATION CAUSING LAD (GLY-128) IS PREVAI AMONG HOLSTEIN CATTLE THROUGHOUT THE WORLD, PLACING THIS DISOR AMONG THE MOST COMMON GENETIC DISBASES KNOWN IN ANIMAL AGRICULTURE. ALL CATTLE WITH THE MUTANT ALLELE ARE RELATED TO BULL, WHO THROUGH THE USE OF ARTIFICIAL INSEMINATION SIRED MAN CALVES IN THE 1950S AND 1960S.

SIMILARITY: BELONGS TO THE INTEGRIN BETA CHAIN FAMILY.

SIMILARITY: CONTAINS 1 VWFA-LIKE DOMAIN.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human membrane type-4 matrix metalloproteinase
                                                                                                                                                                                                                                                                                                                     PROTEOLYTICALLY ACTIVATES PROGELATINASE A. DOES NOT HYDROLYSE COLLAGEN TYPES I, II, III, IV AND V, GELATIN, FIBRONECTIN, LAMININ, DECORIN NOR ALPHA1-ANTITRYPSIN.

CATALYTIC ACTIVITY: CLEAVES PRO-TNF-ALPHA AT THE 74-ALA-|-GLN-75 SITE.

COFACTOR: REQUIRES CALCIUM AND ZINC FOR ACTIVITY (BY SIMILARITY).

SUBCELLULAR LOCATION: ATTACHED TO THE MEMBRANE BY A GPI-ANCHOR.

ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A SHORT/PUENTE-TYPE FORM; ARE PRODUCED BY ALTERNATIVE SPLICING.

TISSUE SPECIFICITY: EXPRESSED IN BRAIN, LEUKOCYTES, COLON, OVARY TESTIS AND BREAST CANCER. EXPRESSED ALSO IN MANY TRANSFORMED AND NON-TRANSFORMED CELL TYPES.
                                                                                                                                                                           SIMILARITY: BELONGS TO PEPTIDASE FAMILY M10A (ZINC METALLOPROTEASE) ALSO KNOWN AS MATRIXIN SUBFAMILY.
                                                                                                                                                                                                               SIMILARITY).

SIMILARITY: CONTAINS 1 HEMOPEXIN-LIKE DOMAIN SIMILARITY: BELONGS TO PEPTIDASE FAMILY M10A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FUNCTION: ENDOPEPTIDASE THAT DEGRADES VARIOUS COMPONENTS OF THE EXTRACELLULAR MATRIX, SUCH AS FIBRIN. MAY BE INVOLVED IN THE ACTIVATION OF MEMBRANE-BOUND PRECURSORS OF GROWTH FACTORS OR INFLAMMATORY MEDIATORS, SUCH AS TUMOR NECROSIS FACTOR-ALPHA. MAY ALSO BE INVOLVED IN TUMORAL PROCESS. NOT OBVIOUS IF ABLE TO
